

# Cloud Solutions for today's Modern Law Firm

Workspace-as-a-Service with U2Cloud

Secure and cost-effective cloud services designed for today's modern law firms.

## Drive growth and improve customer service while cutting costs and complexity

Workspace-as-a-Service will securely host your entire law practice in the cloud: all of the software applications and data needed to run your law firm, fully supported and completely managed. Because our offerings are designed to be flexible to manage and easy to use, we can deliver a superior Workspace experience on any device — without all of the IT headaches.

Your cloud resources can be accessed from any network-connected device including new PCs, older hardware and thin clients. All data and applications are stored centrally, ensuring a higher level of data security and helping simplify regulatory compliance. For end users, these applications are integrated seamlessly, without disturbing current work processes. They look, feel and behave like local applications.

### Key benefits:

- Improve employee productivity with instant access to apps, data and desktops
- Deliver a high performance user experience on any network
- Empower workforce mobility with self-service access to corporate resources
- Secure enterprise content in the cloud and on the device
- Provide a single, flexible solution for comprehensive management

### Secure and compliant

Workspace-as-a-Service with U2Cloud offers enterprise grade security to ensure data and applications are always secure and compliant. Workers can access and sync all of their data from any device and securely share it with people both inside and outside the organization. At the same time IT has the flexibility to manage that data on-premises, in the cloud or use a mix of both for the best economics. Organizations can minimize loss of intellectual property and sensitive private information through centralization of applications and desktops, which keeps all data in the datacenter. Finally, IT can add features such as data encryption, password authentication, secure lock and wipe, inter-app policies and micro VPNs to mobilize apps to further secure data on the device.

With Workspace-as-a-Service, all data transmission is secured through high-performance, standards-based encryption. Application-level security is built-in, monitoring and tracking users and activity to facilitate compliance with government regulations and corporate risk management policies.

### Performance and reliability

Our cloud infrastructure provides your firm with government grade performance and resource uptime, for a fraction of the cost. You can now deliver high performance Windows content over low bandwidth high latency WANs, highly variable 3G/4G mobile networks or a reliable corporate LAN. And IT can deliver an unparalleled, native experience on any mobile device while securing the delivery of mobile, web, and SaaS apps. Together, these technologies help employees produce great results

### Self-service access to all apps

Workspace Suite provides a unified app store that aggregates Windows, web, SaaS and mobile apps for delivery to any device. The app store allows IT to host all enterprise services in a single place where workers have self-service access to the apps they need to be productive. In addition, Once the resources are ready, users receive an email informing them where they can download the relevant client and connect to their resources.

### Predictable costs

Using Workspace-as-a-Service with U2Cloud provides a predictable, per-employee monthly IT spend — lowering upfront capital expenditures with the new pay-as-you-go model. Your organization can now securely and easily integrate remote workers and contractors without adding additional infrastructure. With Workspaces, there are no hidden costs, no software to manage and none of the headaches traditionally associated with IT.

### Optimized experience on mobile devices

People work with a variety of devices and form factors over the course of a day. U2Cloud enables a high level of management and control over file and data sharing and provides extensive security capabilities and enterprise features such as absolute flexibility to choose where data can be stored, robust device security policies, comprehensive auditing features and integration with Microsoft Active Directory.
